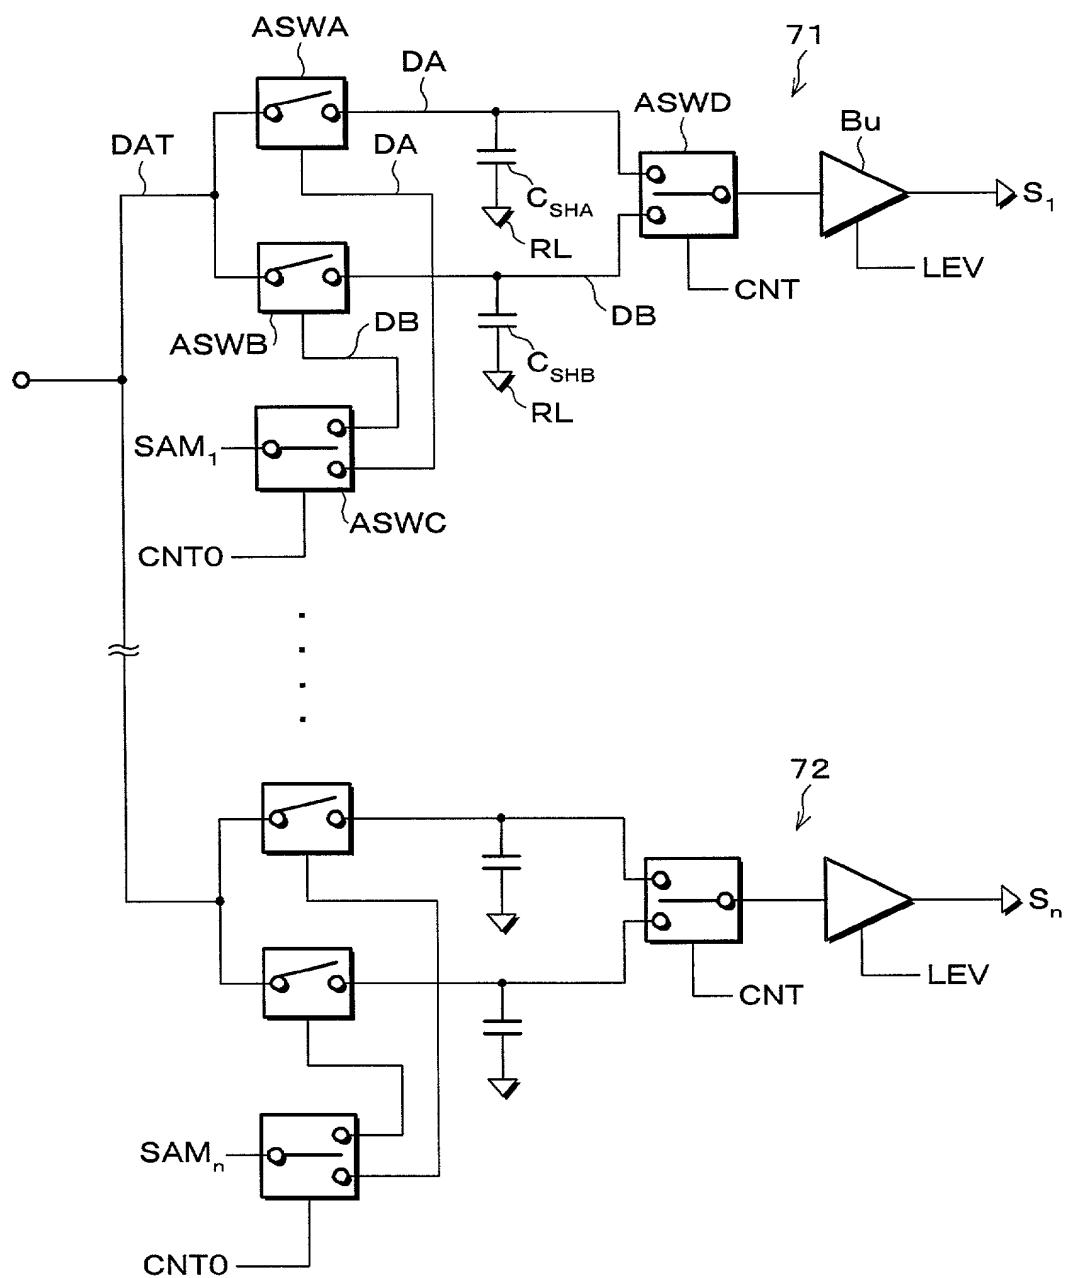

FIG. 20 is a schematic diagram of a circuit for controlling a display device. The circuit includes a plurality of switches SW₁, SW₂, SW₃, and SW₄, which are connected to a common bus line. The bus line is connected to a display device 1. The switches are controlled by a control signal input to the circuit. The control signal is a digital signal that can be in a high state or a low state. The switches are connected to the bus line in a way that allows the control signal to be distributed to the display device. The display device 1 is a rectangular block with a curved line indicating its boundary. The bus line is a horizontal line that runs across the top of the circuit. The switches are connected to the bus line at various points. The control signal is input to the circuit from the left. The circuit is shown in a schematic diagram style with lines representing electrical connections and symbols for switches and a display device.
